## Integrated Roughness Measuring and High Accuracy Contour Measuring Instrument

### New High-Accuracy Contour Detector that Weighs 40% Less Than Previous Models

- The laser optical diffraction scale ensures high resolution over the entire range.
- Contours can be measured and analyzed with high accuracy and high resolution.

### Linear Motor Drive (Patented)

- A linear motor drive ensures high accuracy and high-speed movement.
- Low vibration ensures more stable measurement at high magnifications.

\*See page 8 for the details of the linear drive.

### 2-In-1 Measuring Instrument

Compact high performance detector for roughness measurement and high accuracy contour detector are provided as standard.

### A Choice of All-In-One Space-Saving

Linear series DX type or conventional separate style SD type to suit specific requirements.

### High Accuracy Contour Detector (Digital)

- Contour detector is a high accuracy detector equipped with an optical diffraction scale.
- With minimum resolution of 0.025  $\mu\text{m}$ , this instrument provides high accuracy measurement covering the entire detection range of 50 mm in the Z direction.

### Roughness Pickup for Large Magnification (Option)

- A roughness measurement range of 1000  $\mu\text{m}$  enables provision of minute contour and rough alignment measurement.
- To support large magnification measurement of high-precision processed parts, magnification of up to 500,000x is provided.

## High Accuracy, Wide-Range Hybrid Detector (Option)

- SURFCOM 2900DX3/SD3 comes with a roughness detector and a contour detector as standard. A high accuracy, wide-range hybrid detector can also be added.
- Accurate, efficient measurement of workpieces with various profiles is possible.

For details about the high accuracy, wide-range hybrid detector, see SURFCOM 2900DX3/SD3 (P.14).

Note that this detector is a factory option. Adding the detector to an existing instrument requires that the instrument be shipped to our factory.
