

SURFCOM C5 Type-C/Type-S

Automated Solution for Production Floor Surface Texture Measurement Management

SURFCOM C5 allows customization of the workpiece feed unit and jig production to suit particular needs.

Basic specifications are Type-C (mainly for cylinder heads, cylinder blocks, and other workpieces where a 5-direction approach is required) and Type-S (for camshafts and other shaft workpieces that require a rotary axis).

SURFCOM C5, a Proposal for Engine Production Processes

Current status of roughness measurement in the engine production process

[Target workpiece]

- Cylinder block
- Cam shaft
- Cylinder head
- Connector rod, etc.
- Crankshaft

Portable texture measuring instruments and measurement of jigs are subject to a number of problems

- ① Not universal
- ② Difficult to record judgment results
- ③ Subject to human error

SURFCOM C5 solves all of these problems at once

[Features of SURFCOM C5]

- Measurement efficiency improved by multi-axis control.
- Integrated sensor rotating mechanism ensures measurement in all orientations.
- X-axis tracing driver (200 mm) and Y-axis tracing driver (50 mm) integrated into a single structure (Patented).
- Low-vibration linear motor drive (X-axis).
